

20 March 2017

PhotonStar LED Group Plc

InterConnect 2017 & launch of cloud building management products

PhotonStar LED Group Plc (AIM: PSL, "PhotonStar" or "the Group"), the British designer and manufacturer of intelligent lighting and building control solutions, is participating in the IBM InterConnect 2017 Cloud & Mobile Conference, between 19 to 23 March 2017 in Las Vegas, USA. The Group also announces the commercial availability of the halcyon cloudBMS product from 1 April 2017.

At IBM Interconnect 2017, PhotonStar™ will be presenting a talk outlining the key features of cloudBMS™, a new cloud based solution that delivers an Internet of Things ("IoT") 'building management system as a service'.

The new solution is built on the second generation of its low cost retrofit-able wireless monitoring and control platform, halcyonPRO2™. The new halcyonPRO2™ adds regulation of heating and cooling, shading and power management to the proven lighting control and environmental sensor network already in use in the first halcyon™ product. CloudBMS™, halcyonPRO2™ and cloud based analytics combine to deliver a capable, scalable and secure Building Management System as a Service (BMaaS™) solution at a price point that enables owners of small to medium sized businesses to reduce energy and operating costs and realise new insights into their operations. One of the key features of CloudBMS™ is the sharing of device data with Asset Management software packages such as IBM asset management packages Tririga and Maximo.

The paid for trials for halcyonPRO2™ and halcyon cloudBMS™, are still under evaluation by customers, with several new trials being installed during Q4 2016, as announced in the Trading Update released on 30 January 2017. Currently there are 9 trial customer sites enabled with cloudBMS™ and the Group will make further announcements regarding the trials as appropriate.

Dr James McKenzie, CEO of PhotonStar, said:

"We are delighted to be participating in this prestigious event. PhotonStar's halcyonPRO2 and now cloudBMS have an exciting role to play as a secure, scalable platform for real world commercial Internet of Things applications in building management.

Ongoing trials of halcyon™ and the cloudBMS™ product remain the focus of the Group's future growth strategy".

This announcement contains inside information for the purposes of Article 7 of Regulation (EU) 596/2014.
